Minimum height for RAM 1500 kit

For kits 57370, 88370 and 89370, there must be 8 1/8" between the jounce bumper strike plate and the vehicle frame. Alternatively, measure at least 23 1/2" from the center of the axle to the lip of the fender. If these measurements are less than required or the vehicle has plastic wheel arch moldings or has a modified suspension, contact Air Lift customer service for assistance.
